Onset offers HOBO Measurement & Verification System for building energy performance

January 20, 2010 - Green Buildings

Onset, a supplier of data loggers, is offering the HOBO Measurement & Verification System, a portable energy logging system for measuring, analyzing and documenting building energy performance.

The self-contained system makes it convenient and economical for energy performance contractors, energy consultants, and building energy managers to track the performance of building systems, such as chillers and packaged HVAC units, and verify the impact of energy efficiency improvements.

Users can plot and analyze energy performance data with the accompanying HOBOware software. HOBOware provides an intuitive, graphical user interface that enables users to quickly and easily graph, analyze and print data files, as well as export the data to Microsoft Excel and other spreadsheet programs. *
