Richey Woodworking & Design works toward green power with two new energy saving projects

January 02, 2008 - Construction Design & Engineering

Mark Richey Woodworking and Design has installed a \$500,000 biomass furnace to heat the building and make the company more environmentally sound.

The furnace will burn the wood/sawdust byproduct that in turn heats a boiler that circulates water throughout the wood shop.

Also the company has received a grant of \$474,000 from the Mass. Technology Collaborative (MTC) to build a wind turbine. The 600 kilowatt turbine will cost approx. \$1.45 million.

These two energy saving projects will help the wood shop get closer to being self-sufficient and a 100% green company.
