Keith Vanderbilt - Energy-saving, high-speed hand dryers

April 21, 2011 - Green Buildings

After many years of working in the Division 10 industry I decided to open a company that focuses on energy saving high speed hand dryers as well as restroom partitions.

Restroom Remodels Company is the master distributor for the Extreme Air Hand Dryer. The Extreme Air uses 90% less energy than other conventional hand dryers. It is the most compact high performance dryer in the industry. It is 43% smaller than the old "industry standard" high-speed dryers yet it is just as powerful and uses less electricity. It provides a 95% cost savings versus paper towels. The patented design of the EXT series is the first and only high speed hand dryer to reduce power consumption to an industry leading 540 watts. That is up to 3 times less power than other "green" dryers. The EXT dryers do not require a dedicated line. You can put up to 3 dryers on one line. These hand dryers are made in the USA and offer LEED credits.

I also chose the Dyson Air Blade as part of his product line. The Dyson offers a HEPA filter before blowing air onto hands and also offers LEED credits.

Restroom Remodels Co. also provides restroom partitions in just about all materials including powder coated steel, solid plastic, phenolic and stainless steel. They have chosen partition companies that promote sustainable building products. Many of the partition materials offer LEED credits as well. As an added service, Restroom Remodels can offer installation just about anywhere the USA.

No matter if you are a facility manager for a major chain, a contractor, or an owner of a single location looking for restroom partitions and dryers, Restroom Remodels Co. is the company to call. They can give you an immediate quote over the phone.

Keith Vanderbilt is president of Restroom Remodels Co., Ipswich, Mass.
