Mini Warehousing, Inc. goes solar powered

May 24, 2012 - Spotlights

Mini Warehousing, Inc. has gone solar powered! Mini Warehousing which rents and sells secure, on-site storage containers cares about our earth. For that reason, they have installed a large solar panel array at their facility that will produce approximately 1 megawatt hours of energy every year. To produce the same amount of energy, a conventional power plant would emit an estimated 6,300 metric tons of carbon dioxide. This is reduction in emissions is equivalent to planting 139,579 trees every year! They work here and live here – just like you. That's why they've converted their facility to operate on 100% solar energy.
