North Branch headquarters earns third Energy Star

November 21, 2012 - Green Buildings

North Branch Construction's LEED Silver Certified corporate headquarters has earned the U.S. Environmental Protection Agency's (EPA's) Energy Star for (commercial) Building and Plants for the third year in a row. The Energy Star is the national symbol for protecting the environment through superior energy efficiency. The North Branch facility is one of only 12 commercial office buildings in the state of N.H. to have earned the EPA's Energy Star. North Branch improved its energy performance by installing cost-effective, energy efficient systems and managing energy strategically across the entire organization.

Energy efficiency was a leading factor in the design of the building's HVAC and electrical systems, including sophisticated lighting control systems, which not only improve the company's energy bill, but also the occupants overall well-being. Numerous indoor air quality and occupant comfort measures were introduced, including increased ventilation, improved thermal control, abundance of daylight and views to the outdoors from most occupied spaces.

North Branch also established an education program used to promote sustainability and energy efficiency ideas among the North Branch employees, clients and business partners.
