Onset releases Facility Manager's Guide to Data Logging

August 02, 2013 - Owners Developers & Managers

The energy required to operate buildings in the United States is the largest sector of our energy use, representing about 40% of U.S. energy demand. Measuring building performance can help facility staff better manage this energy use.

A new 30-page best practices guide from Onset, *The Facility Manager's Guide to Data Logging*, discusses monitoring strategies and techniques that can be utilized by building professionals looking to reduce energy use and optimize performance of their facilities. The guide covers measurement approaches for a variety of building systems including lighting, HVAC, indoor air quality, and plug loads, in addition to methods for quantifying savings. A free copy of the guide can be downloaded at www.onsetcomp.com/FMG.

Onset is one of the world's leading suppliers of data loggers. The company's HOB0 data logger and weather station products are used around the world in a broad range of applications, including building energy performance monitoring, water resources management, and ecological and agricultural research. Based on Cape Cod, Onset has sold more than 2 million data loggers since the company's founding in 1981.
