CTA Construction participates in ribbon cutting for Fairhaven Elementary School: project team includes hmfh and daedalus projects

November 14, 2013 - Construction Design & Engineering

CTA Construction participated in a ribbon cutting ceremony for a new, 78,000 s/f "model" school, the Leroy L. Wood Elementary School, constructed within 14 months. This \$20 million school is situated at the site of the formerly overcrowded and inadequate Wood Elementary School which was demolished prior to the start of construction.

Students in the new Fairhaven Pre-K to Grade 5 School will now enjoy a library filled with light, full-sized cafeteria/kitchen and gymnasium, as well as specialty classrooms -- music classrooms with instrument storage, computer classroom dedicated art classroom, and a project room designed to accommodate science and other messy, hands-on exploration. This energy-efficient new building is oriented to take advantage of day-lighting through skylights and classroom windows, and the artificial lighting is designed to dim automatically when there is sufficient daylight. This building not only participates in the Massachusetts Collaborative for High Performance School (MA-CHPS), but holds the distinction of being the most economically constructed new school in the Commonwealth since 2004.

The project architect is HMFH Architects, Inc. and the owner's project manager is Daedalus Projects, Inc.

The Mass. School Building Authority's Model School Program involves the adaptation and re-use of designs of successful, recently constructed schools. Model schools are efficient and easy to maintain, contain optimal learning spaces, can accommodate different enrollments, incorporate sustainable features and be flexible in educational programming spaces while supporting community use.

CTA Construction Co, Inc., is an award-winning construction management and general contracting firm with a history of excellence in building commercial, residential, academic, civic, retail, and hospitality facilities. Based in Waltham, CTA Const.'s portfolio includes construction projects valued at over \$800 million. As a leader in green building, the construction firm has helped numerous clients build sustainably and in meeting LEED Silver or greater and MA-CHPS standards.
