Columbia Construction, IA Interior Architects and Jones Lang LaSalle complete build-out for Twitter

September 04, 2014 - Owners Developers & Managers

Having acquired two Boston area companies (Bluefin Labs and Crashlytics) in 2013, Twitter sought to combine the two separate groups under one roof. Twitter's new space on two floors of the 141 Portland St. office complex combines the companies' workforces and provides capacity for up to 200 employees for the growing company.

Totaling 30,000 s/f, the Columbia Construction, IA Interior Architects and Jones Lang LaSalle team built-out the high tech space to be centered on an open concept floor plan with a benching system for workstations. Conference room walls and doors of glass promote transparency. Soft seating areas, standing desks, lounge areas, and game rooms are interspersed throughout the space. A centrally located common area is used to host office-wide events. A mix of spaces, ranging from cozy conference rooms to larger boardroom-type spaces, are available for meetings. The reception area, which includes a lush garden wall, is symbolic of the growth of not only Twitter but also of the Boston region's innovation sector boom. Custom-built millwork reception desk, wood plank ceiling, a 17 foot living wall and a 500 gallon custom-built saltwater fish tank complete the interior fit-out.

This project was completed on a fast-track basis, with a three month construction schedule.
