Jewett Construction selected for ecomaine scale house project

June 16, 2017 - Front Section

South Portland, ME Design-build construction manager and general contractor, Jewett Construction, has been selected to manage the scale house replacement at ecomaine. This is the second ecomaine project for Jewett, following an interior locker room renovation in 2016.

Ecomaine is a non-profit waste management company located in Maine which processes nearly 45,000 tons of recyclable material each year. Using single-stream recycling, ecomaine makes recycling easy for residents, resulting in an increased participation rate, serving nearly one third of the population of the state. Any non-recyclable materials collected at ecomaine are also re-used as fuel to produce electricity.

The scale house at ecomaine is used to weigh vehicles when they arrive and depart from the facility. The project will include the creation of a temporary scale house, demolition of the existing structure, relocation of the scale control equipment, and the construction of a new building in addition to various site improvements.

“We could not have been more pleased to work with Jewett on our locker room renovation. The site work, attention to safety and ability to react to changes throughout the process was quite an accomplishment. We look forward to continuing the relationship with their team of professionals on the scale house project,” said Winfield Stratton, ecomaine project manager, on selecting Jewett. Scale house construction is currently underway and expected to be completed this summer.

Jewett Construction is a family-owned construction management company with a 45-year history in New England. Jewett specializes in commercial construction projects in the manufacturing, industrial, retail and automotive sectors.
