ABC new member company: Inspired Technology

May 18, 2018 - Construction Design & Engineering

North Easton, MA ABC MA is happy to welcome Inspired Technology and Communications (ITC), a full-service design, installation and technology integration expert, as its newest member. ITC not only helps businesses learn and acquire new technology systems, but they also integrate the systems to be used to its fullest capabilities. With expertise in infrastructure cabling, commercial telephone systems, audio/video, access control, and video surveillance, ITC has an expansive background that can help any business.

Imagine arriving at the office in the morning knowing you have intelligent systems working for you. You enter your security code and notice as the lights automatically turn on, the temperature resets to work mode and your favorite playlist begins to fill the hallways. Others begin to trickle in for the 9:00 meeting as you fire up the conference room systems with the touch of a button. The office can be set up for system control to improve efficiency, convenience, security and entertainment.

Seamlessly integrate the various systems of an automated conference room: projectors, lighting, video & audio conferencing, and overall control of the entire integrated system. Take your restaurant or bar to the next level. Help increase your earnings by keeping your customers entertained with the big game on multiple video displays.

Whether it's cabling, phone systems, multi-media or lighting needs, Inspired Technology and Communications offers a one-stop solution, either to end users or general contractors seeking the convenience of working with a single company for all a project's technology needs.

In less than a decade since its founding in 2009, Inspired Technology and Communications has become New England's leading technology integrator. There can be little doubt that the pace of technological advancement will accelerate even further. But Inspired will continue to offer the ability to remain on the cutting edge while providing end users and general contractors with user-friendly commercial and residential technology solutions.
