Margulies Perruzzi completes project for Boston Scientific totaling 20,000 s/f

April 19, 2024 - Construction Design & Engineering

Boston, MA Margulies Perruzzi (MP) has completed renovations to create an Innovation & Conference Center for Boston Scientific Corp., a global medical technology leader. The centralized training center creates a 20,000 s/f area featuring technology and interactive learning spaces to enable doctors and company employees to receive hands-on training and education about the company's innovative devices.

The innovation center is designed to enhance the learning experience and create a stimulating atmosphere conducive to creativity and knowledge exchange. Margulies Perruzzi converted existing office space into a multi-purpose training and conference center, including procedure rooms for simulated surgeries, large conference rooms with movable walls, an auditorium / theater with a screen, and amenity spaces. In addition to lead-lined walls to shield occupants from lasers, the

procedure rooms have high-end audio visual (AV) equipment and cameras on pivot beams in each room so mock procedures can be filmed and broadcast for educational purposes.

The interior design features the company's branding. Margulies Perruzzi worked closely with a flooring vendor for a custom design of the carpet tile featuring strong blue and gray hues. Lighting was a key component in the design of the Innovation & Conference Center. The fixtures selected for certain spaces are low-profile that allowed the light fixture to be installed close to the ceiling, providing more clear height in the rooms. This allowed Margulies Perruzzi to design unique layouts and designs to support the use of each space.

Margulies Perruzzi has worked with Boston Scientific on multiple projects over the past 10 years, including space at the company's Marlborough headquarters, and modernized logistics and distribution functions at the company's global customer fulfillment center in Quincy, MA.

The project team includes:

- Client/Owner: Boston Scientific;
- Architect/Interior Design: Margulies Perruzzi;
- General Contractor: Columbia Construction;
- A/V: CDA; and
- MEP Engineer: R.W. Sullivan.
