Syska Hennessy Group appoints Mayerhofer as supervising commissioning agent in Boston

May 17, 2024 - Construction Design & Engineering

Matthew Mayerhofer

Boston, MA Syska Hennessy Group, the international engineering firm, has appointed Matthew Mayerhofer, LEED AP, CEM, as supervising commissioning agent. He is based in the Boston office.

Mayerhofer, who has nearly 20 years of experience in design, commissioning, and sustainability, will oversee the growth of the local commissioning team and expand business opportunities for MEP, facility assessments, energy audits, and commissioning-related work. Such work, which involves understanding of systems operations, testing, and verification of mechanical, electrical, and plumbing systems, has become a critical component of engineering projects, especially for those with ambitious targets for decarbonization and energy efficiency in renovated or existing buildings.

Previously, Mayerhofer served as a senior infrastructure and sustainability engineer at Tripadvisor. Early in his career he worked at WSP as an HVAC designer and subsequently as a commissioning project manager. His project portfolio includes Tripadvisor's global headquarters in Needham, Mass.; infrastructure projects at UMASS Amherst, Babson College, and Worcester State College; commissioning for UMASS medical schools; upgrades to ORs at UMASS Memorial Clinton Hospital and New England Baptist Hospital; the U.S. Mint building in Washington, D.C.; the National Museum of African American History and Culture in Washington, D.C.; Boston's Logan Airport; and JPMorgan Chase bank branches in Mass.

"Syska already has a strong commissioning practice nationally, so Matthew will focus on developing our local expertise," said Andrew Krenning, associate managing director of the Boston office. "The 'on-site' presence of sustainability and commissioning professionals will make it easier for us to staff and manage our projects throughout the New England region."

Syska Hennessy Group is a leading global, full-service MEP, information and communication technology (ICT), vertical transportation, sustainability/high performance design, and commissioning engineering firm. With more than 500 professionals across 20 offices, the company provides a full range of engineering services for projects of every size and budget. Since 1928, Syska has been designing smarter, safer, more sustainable, and more efficient buildings by integrating essential systems that respond and adapt to a changing world.
